EDUCATION

University of Houston
Bachelor's, Computer Science

August 2019 - December 2023
GPA: 3.9

EXPERIENCE

Infodat

Software Developer

Houston, TX, USA

January 2024 - Present

- Developed and maintained a full-stack application, delivering new features and performance optimizations that improved usability and reliability.
- Increased user satisfaction by 15% by designing interactive dashboard widgets with TypeScript and Java, enhancing engagement and workflow productivity.
- Reduced chart implementation time by 70% by building reusable D3 components, contributing to an open-source library and accelerating integration across internal tools.
- Designed and implemented RESTful APIs for RFID-enabled cabinet integration, enabling real-time inventory tracking and improving stock accuracy.
- Built a Google Cloud Pub/Sub subscriber to filter and process category-based messages for item creation and updates, cutting processing time by 50% and increasing system throughput.
- Collaborated in an agile team, driving design discussions and conducting PR reviews to ensure high-quality releases.

Infodat

Software Developer Intern

Houston, TX, USA

May 2023 - December 2023

- Shipped 5 production-ready features using Spring Boot and React within the first 10 weeks of onboarding.
- Maintained 80% test coverage through unit and integration tests, ensuring system reliability and reducing production bugs.
- Built a CI/CD pipeline with GitHub Actions to automate builds, tests, and deployments on AWS EC2, cutting release time and enabling continuous delivery.

University of Houston

Teaching Assistant

Houston, TX, USA

August 2022 - May 2023

- Led weekly lab sessions for 50+ students and designed 20+ hands-on coding challenges in C++, reinforcing key data structures and algorithms concepts.

PROJECTS

Brain Tumors Classification | Python, Tensorflow, NumPy

- Achieved 91% accuracy in categorizing brain tumors by developing and training machine learning model using TensorFlow leveraging ResNet 50 architecture on dataset of 3,000+ MRI images.
- [Link to project](#)

Job Scheduler

- Designed and implemented a database-driven cron scheduler in Spring Boot, allowing dynamic task registration and rescheduling at runtime via RESTful APIs.
- [Link to project](#)

Internship Recommender | Python, NLTK, Selenium, BeautifulSoup

- Implemented a content-based recommendation system to match resumes with relevant job opportunities.
- Automated the ingestion of 600+ internship listings by developing a scalable web-scraping pipeline using Selenium and Python enabling large-scale data analysis.
